

Homework 3

Kenigbolo Meya Stephen

February 23, 2016

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

1. Kernel density estimation: use these two data sets - klient1.txt and klient3.txt. Plot the density distribution of these two data sets. This represents the time of week, when two different groups of people go shopping over the entire year. Choose an informative kernel width and justify your choice. Characterise briefly these two data sets (klient1 and klient3)?

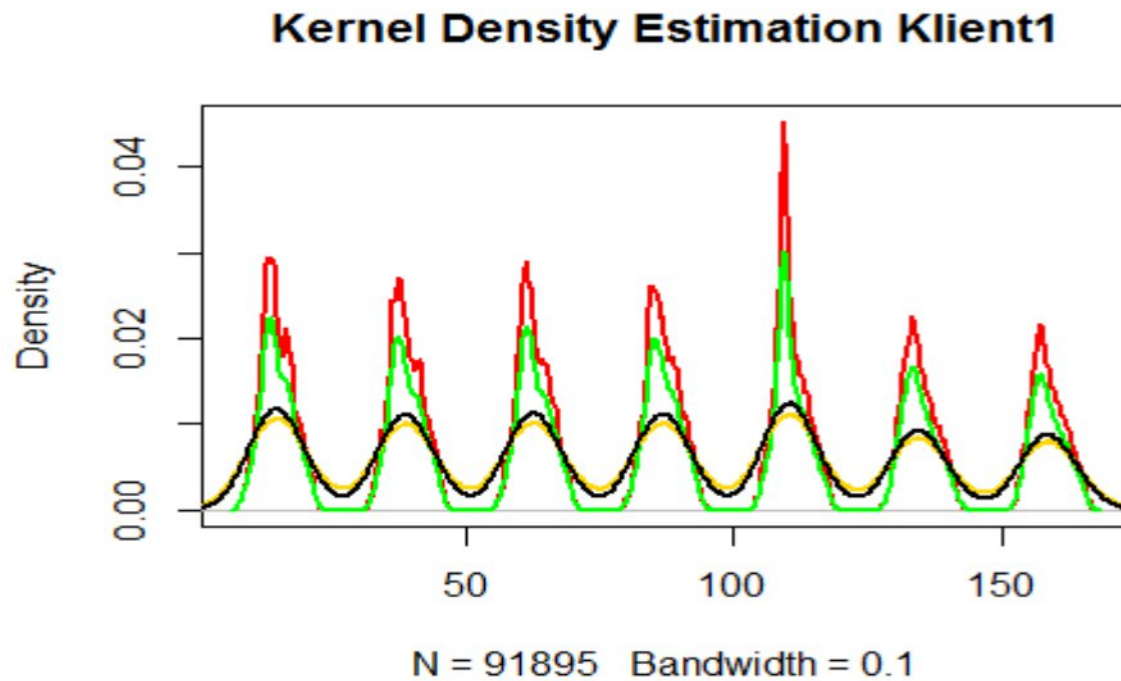

```
library(ggplot2)
klient1 <- read.table("C:/Users/Kenigbolo PC/Desktop/Data Mining/klient1.txt")
klient3 <- read.table("C:/Users/Kenigbolo PC/Desktop/Data Mining/klient3.txt")
```

*Density distribution of klient1

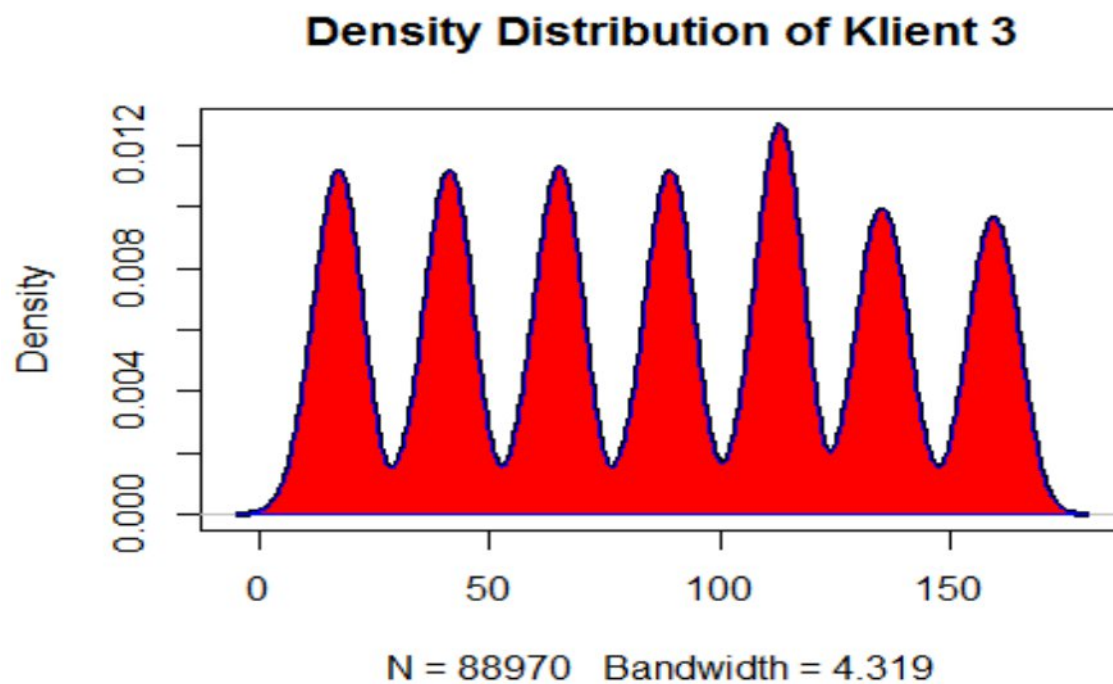

*Density distribution of klient1 (selected bin width justification)

My preferred bin width for the density estimation is 0.1 (red line)

*Density distribution of klient

*Density distribution of klient3 (selected bin width justification)

My preferred bin width for the density estimation is 0.1 (red line)

2. Study the data Attach:product_time_shop.txt. There is a information about a number of shops and times when particular products (items) sold through the week. Describe the data - what products, shops, how many purchases of different products in different shops?

```
product_time_shop <- read.table("C:/Users/Kenigbol o PC/Desktop/Data Mining/pr
oduct_time_shop.txt", sep = ";", header = TRUE)
product_time_shop$date = as.Date(as.character(product_time_shop$date), '%Y%m%
d')
```

Data Description The dataset contains four shops with shop_id's as 3, 4, 18, 21 and 32.

```
print(unique(product_time_shop$shop_id, incomparables = FALSE))
## [1] 18 21 3 32 4
```

The dataset also contains eleven products however they can still be further grouped into 9 by categorizing Eggs, Sour_Cream and Milk as single products but this will not be healthy in the analysis of the data.

```
print(unique(product_time_shop$product, incomparables = FALSE))
## [1] Banana Sour_Cream_2 Sour_Cream_1 Grapes Coffee_Cream
## [6] Eggs_1 Eggs_2 Milk_1 Milk_2 Whipped_Cream
## [11] Vastlakukkel
## 11 Levels: Banana Coffee_Cream Eggs_1 Eggs_2 Grapes Milk_1 ... Whipped_Cre
am
```

The dataset contains 12 unique dates

```
print(unique(product_time_shop$date, incomparables = FALSE))  
## [1] "2014-01-04" "2014-01-19" "2014-02-08" "2014-03-04" "2014-04-07"  
## [6] "2014-04-15" "2014-06-01" "2014-06-07" "2014-10-24" "2014-10-31"  
## [11] "2014-12-23" "2014-12-31"
```

The Total frequency of all products are as follows;

```
library(plyr)  
print(count(product_time_shop, 'product'))  
  
##           product  freq  
## 1           Banana 24847  
## 2    Coffee_Cream 20531  
## 3             Eggs_1 10089  
## 4             Eggs_2   281  
## 5             Grapes  3202  
## 6             Milk_1 14874  
## 7             Milk_2 25715  
## 8    Sour_Cream_1   9704  
## 9    Sour_Cream_2 15876  
## 10    Vastlakukkel  4109  
## 11 Whipped_Cream  9264
```

Purchases of products in shop with shop_id = 3

```
shop_3 <- subset(product_time_shop, shop_id == 3)  
print(count(shop_3, 'product'))  
  
##           product  freq  
## 1           Banana 6778  
## 2    Coffee_Cream 4272  
## 3             Eggs_1 1880  
## 4             Eggs_2  100  
## 5             Grapes  710  
## 6             Milk_1 3568  
## 7             Milk_2 5629  
## 8    Sour_Cream_1 2597  
## 9    Sour_Cream_2 2891  
## 10    Vastlakukkel  939  
## 11 Whipped_Cream 2285
```

Purchases of products in shop with shop_id = 4

```
shop_4 <- subset(product_time_shop, shop_id == 4)  
print(count(shop_4, 'product'))  
  
##           product  freq  
## 1           Banana 8677  
## 2    Coffee_Cream 7259  
## 3             Eggs_1 3704
```

```
## 4      Eggs_2  181
## 5      Grapes 1199
## 6      Milk_1 5173
## 7      Milk_2 8309
## 8 Sour_Cream_1 3206
## 9 Sour_Cream_2 5504
## 10 Vastlakukkel 1784
## 11 Whipped_Cream 3815
```

Purchases of products in shop with shop_id = 18

```
shop_18 <- subset(product_time_shop, shop_id == 18)
print(count(shop_18, 'product'))
```

```
##      product freq
## 1      Banana 4080
## 2 Coffee_Cream 4516
## 3      Eggs_1 1326
## 4      Grapes  495
## 5      Milk_1 2740
## 6      Milk_2 4968
## 7 Sour_Cream_1 1817
## 8 Sour_Cream_2 3046
## 9 Vastlakukkel  730
## 10 Whipped_Cream 1168
```

Purchases of products in shop with shop_id = 21

```
shop_21 <- subset(product_time_shop, shop_id == 21)
print(count(shop_21, 'product'))
```

```
##      product freq
## 1      Banana 1727
## 2 Coffee_Cream 1418
## 3      Eggs_1 1106
## 4      Grapes  273
## 5      Milk_1  836
## 6      Milk_2 2440
## 7 Sour_Cream_1  848
## 8 Sour_Cream_2 1569
## 9 Vastlakukkel  273
## 10 Whipped_Cream 600
```

Purchases of products in shop with shop_id = 32

```
shop_32 <- subset(product_time_shop, shop_id == 32)
print(count(shop_32, 'product'))
```

```
##      product freq
## 1      Banana 3585
## 2 Coffee_Cream 3066
## 3      Eggs_1 2073
```

```
## 4      Grapes    525
## 5      Milk_1 2557
## 6      Milk_2 4369
## 7  Sour_Cream_1 1236
## 8  Sour_Cream_2 2866
## 9  Vastlakukkel   383
## 10 Whipped_Cream 1396
```

3. Draw boxplots that would allow comparing different weekdays, shops, and product sales. Identify some meaningful illustrations to draw conclusions about
 - 1) different weekdays,
 - 2) different products ,
 - 3) shops. State your hypothesis and then draw respective analysis of data.

Boxplot to compare weekdays and products in general

3.1 Boxplot to compare weekdays and products in shop with shop_id = 3

3.2 Boxplot to compare weekdays and products in shop with shop_id = 4

3.3 Boxplot to compare weekdays and products in shop with shop_id = 18

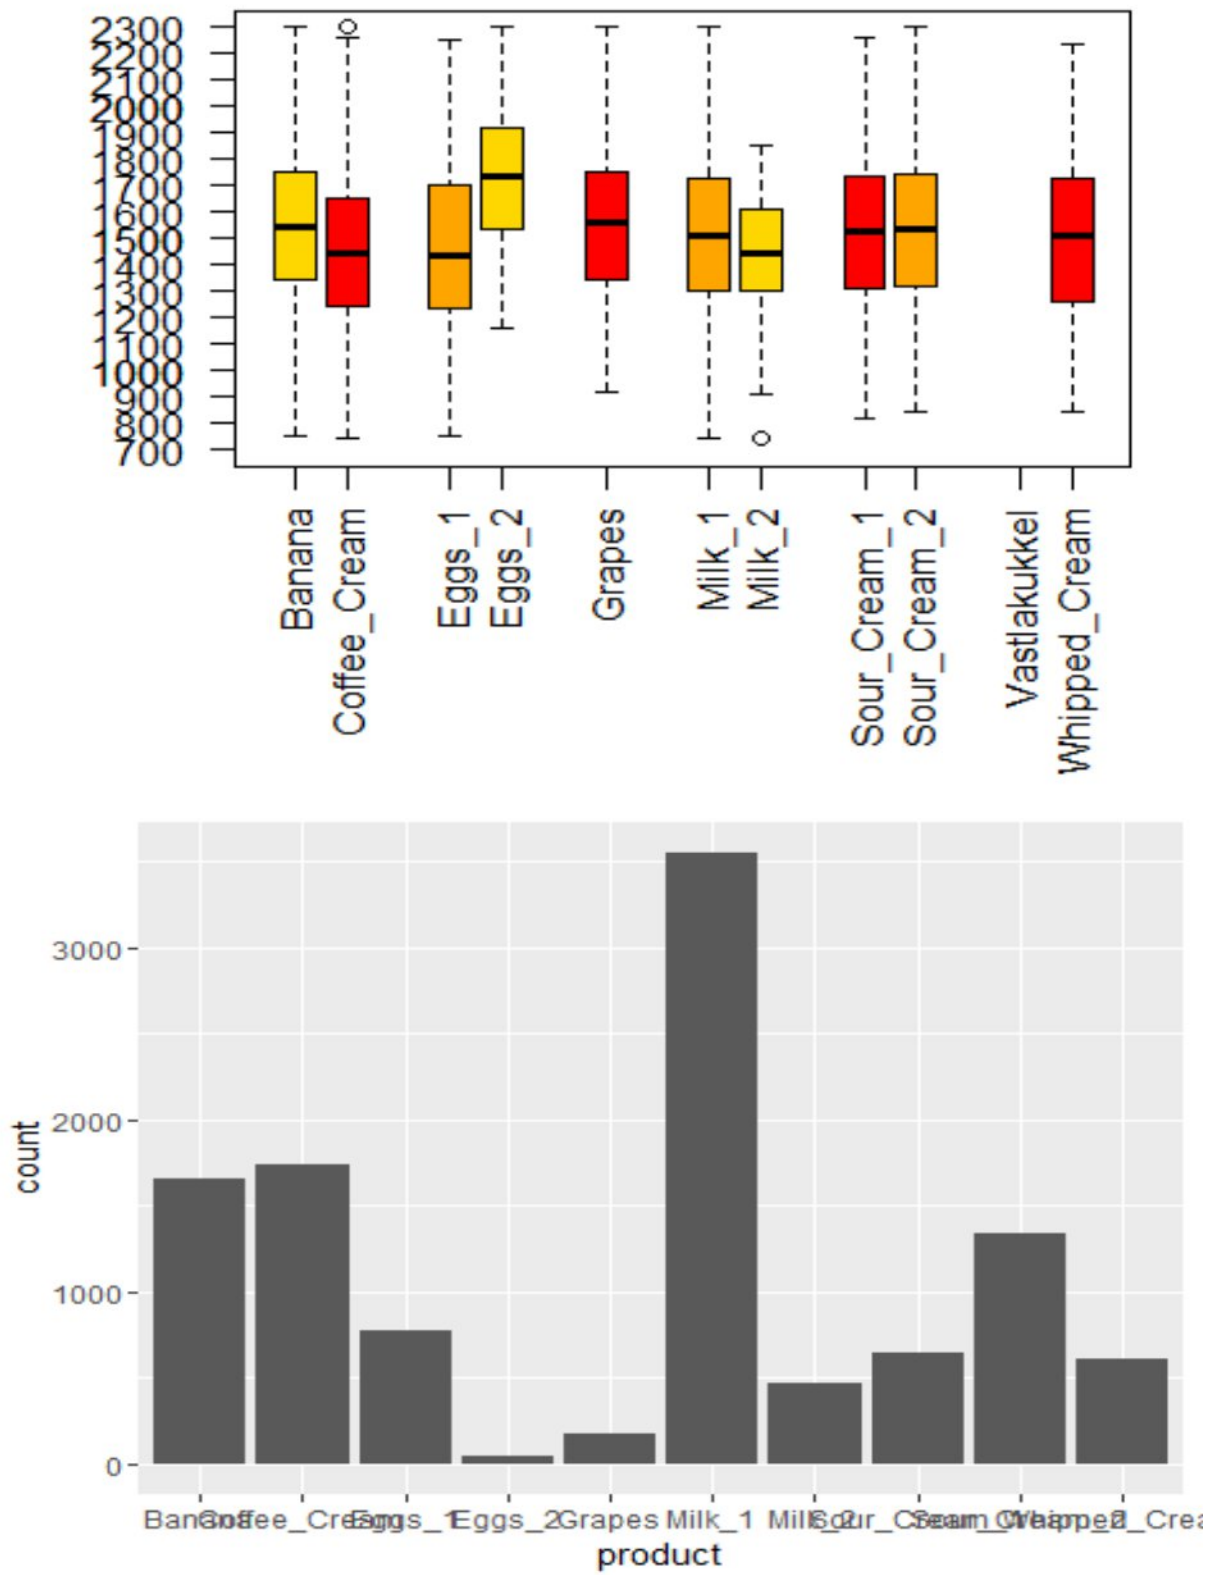

3.4 Boxplot to compare weekdays and products in shop with shop_id = 21

3.5 Boxplot to compare weekdays and products in shop with shop_id = 32

3.6.1 Boxplot for 2014-01-04

3.6.2 Boxplot for 2014-01-19

3.6.3 Boxplot for 2014-02-08

3.6.4 Boxplot for 2014-03-04

3.6.5 Boxplot for 2014-04-07

3.6.6 Boxplot for 2014-04-15

3.6.7 Boxplot for 2014-06-01

3.6.8 Boxplot for 2014-06-07

3.6.9 Boxplot for 2014-10-24

3.6.10 Boxplot for 2014-10-31

3.6.11 Boxplot for 2014-12-23

3.6.12 Boxplot for 2014-12-31

From the analysis of different weekdays and boxplot of several individual days one can deduce that certain products were not available on certain days most notably was Vastlakukkel which was notably absent all through the days except for Tuesday 4th of March 2014. A surprising one though was the Eggs2 which wasn't available most of the times too. There were other missing items sometimes that included Grapes, Eggs1 and Milk1 occasionally.

I will postulate an hypothesis in respect to this stating that the possibility of Tuesday 4th of March being a public holiday (religious, governmental etc.) or of cultural importance to the purchase of Vastlakukkel (signified by its high demand) has a probability greater than 0.5 ($P > 0.5$). Also the high purchase for Milk_2 almost everywhere (for all days and shops signifies) that there probably is a higher preference for Milk_2 either due to size or quality (how good the eggs taste). Finally on the days which were within holiday periods, shopping volume was relatively high when compared to other days in the dataset.

4. Use the same data as in 2. Explore the data and identify if any of the shops has run out of any popular product during the day (which shops, products, days?). Draw the density plots to convince the reader or shop manager. Formulate the principles of an automated procedure to identify (all) such events.

From the analysis in question two, the top three popular products are Milk-2(purchased 25,715), Banana(purchased 24,847 times) and Coffee-Cream (purchased 20531 times). All

shops never really ran out of these popular products however there are some products with some interesting data I think is worth pointing out.

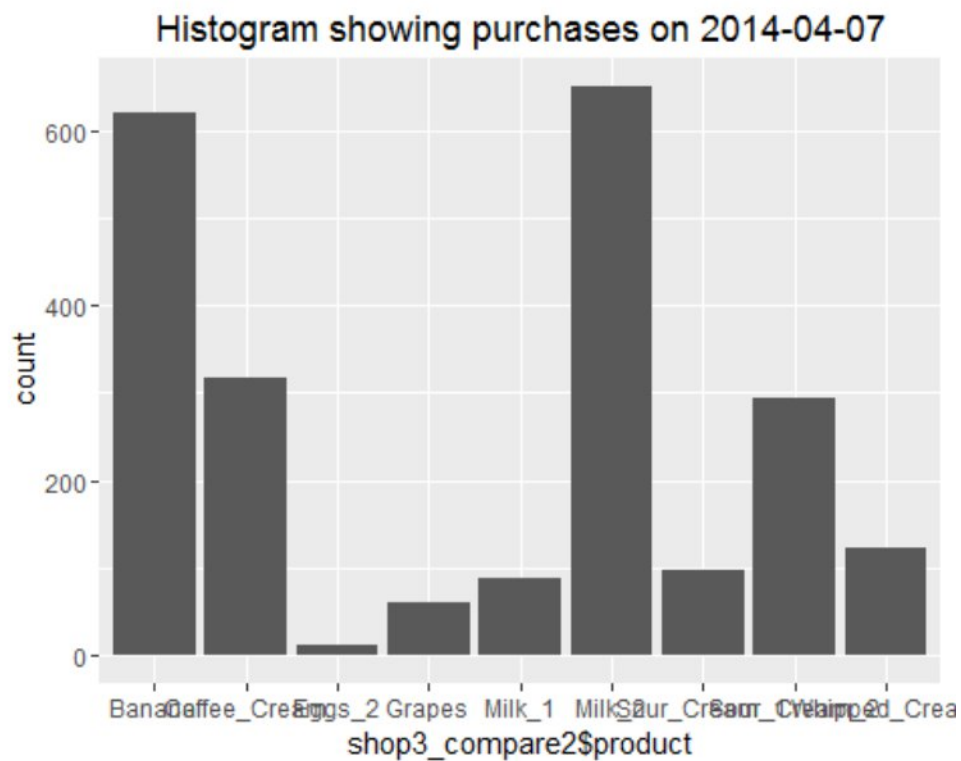

Boxplot 3.2 shows some interesting data for Vastlakukkel and Eggs. In shop 3, all products were available every day except for Vastlakukkel (which was only available on Tuesday 4th of March 2014), Eggs1 (not available for Monday 7th of April 2014) and Eggs_2 which was not available on Wednesday 31st of December 2014 as can be seen below

```
##      product freq
## 1    Banana  536
## 2 Coffee_Cream 276
## 3    Eggs_1   73
## 4    Eggs_2    9
## 5    Grapes   64
## 6    Milk_1  686
## 7    Milk_2   44
## 8 Sour_Cream_1  74
## 9 Sour_Cream_2 222
## 10 Vastlakukkel 939
## 11 Whipped_Cream 223
```

```
##      product freq
## 1    Banana  622
## 2 Coffee_Cream 317
## 3    Eggs_2   10
## 4    Grapes   60
## 5    Milk_1   88
```

## 6	Milk_2	652
## 7	Sour_Cream_1	96
## 8	Sour_Cream_2	295
## 9	Whipped_Cream	122

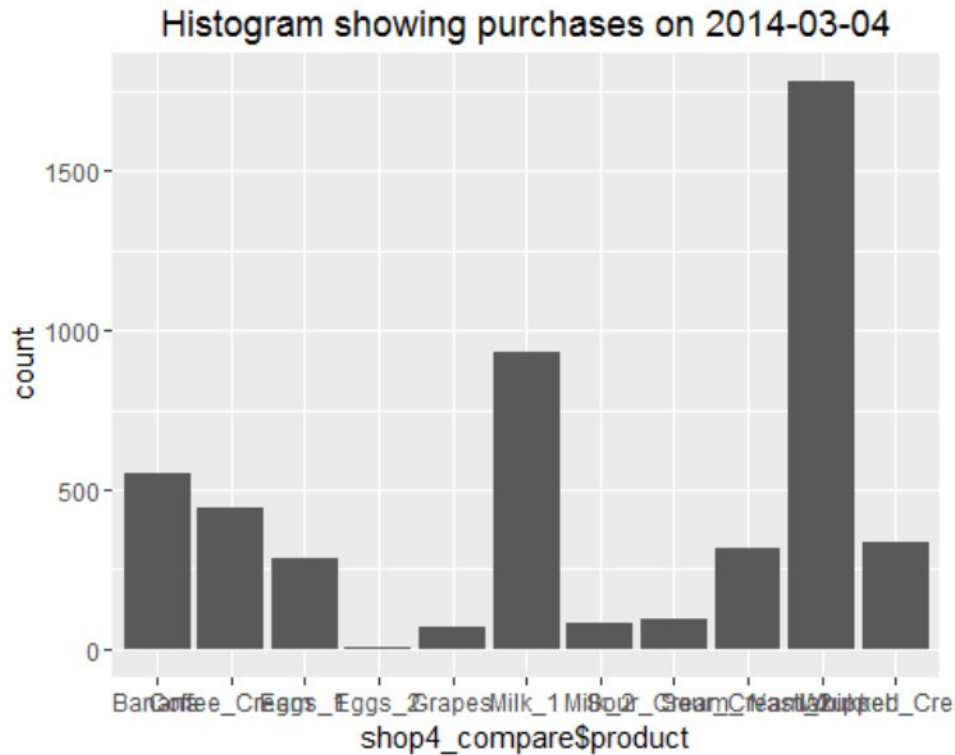

##	product	freq
## 1	Banana	494
## 2	Coffee_Cream	426
## 3	Eggs_1	382
## 4	Grapes	7
## 5	Milk_1	114
## 6	Milk_2	730
## 7	Sour_Cream_1	410
## 8	Sour_Cream_2	277
## 9	Whipped_Cream	359

Boxplot 3.3 also holds some interesting data for Vastlakukkel. In shop 4, all products were available every day except for Vastlakukkel which was only available on Tuesday 4th of March 2014.

##	product	freq
## 1	Banana	553
## 2	Coffee_Cream	440
## 3	Eggs_1	285
## 4	Eggs_2	8
## 5	Grapes	69
## 6	Milk_1	931
## 7	Milk_2	83
## 8	Sour_Cream_1	96
## 9	Sour_Cream_2	319
## 10	Vastlakukkel	1784
## 11	Whipped_Cream	333

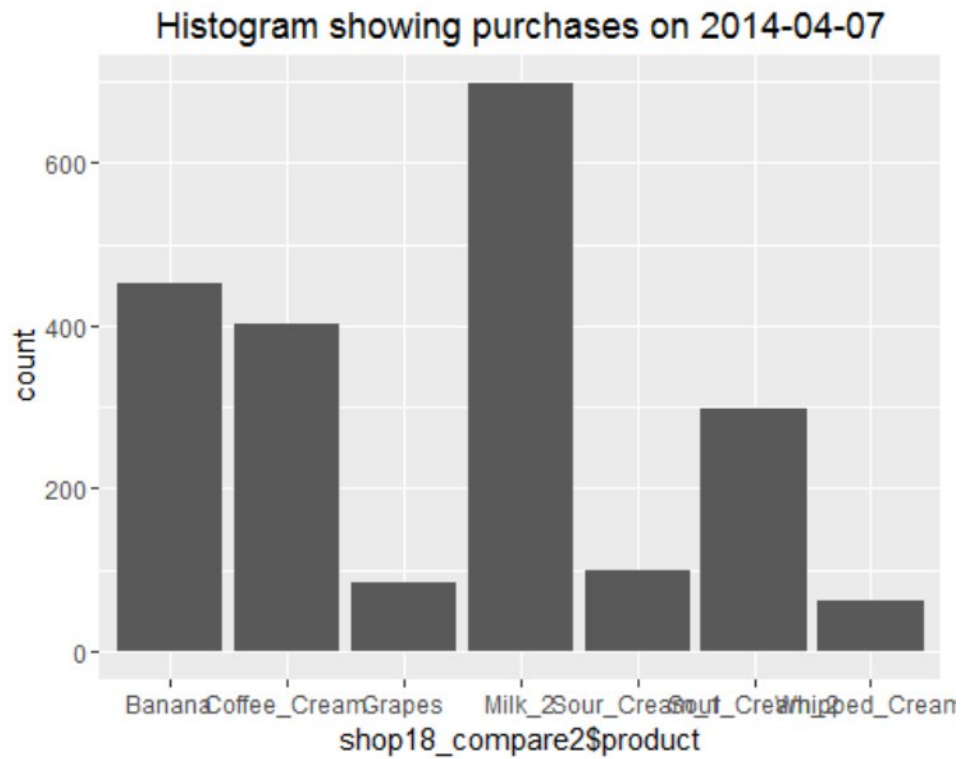

Boxplot 3.4 shows a shift in the trend, further analysis provides us with details of several missing products on Monday 7th of April 2014 in shop 18 as can be seen in the statistics below. Eggs2 was never present in the shop whereas Vastlakukkel was as usual present only on Tuesday 4th OF March 2014. Milk1 was also missing at shop 18 on Tuesday 15th April 2014.

##	product	freq
## 1	Banana	421
## 2	Coffee_Cream	316
## 3	Eggs_1	133
## 4	Grapes	27
## 5	Milk_1	585
## 6	Milk_2	82
## 7	Sour_Cream_1	75
## 8	Sour_Cream_2	251
## 9	Vastlakukkel	730
## 10	Whipped_Cream	160

```
##      product freq
## 1      Banana  452
## 2 Coffee_Cream 401
## 3      Grapes   83
## 4      Milk_2  699
## 5 Sour_Cream_1   98
## 6 Sour_Cream_2  297
## 7 Whipped_Cream  61
```

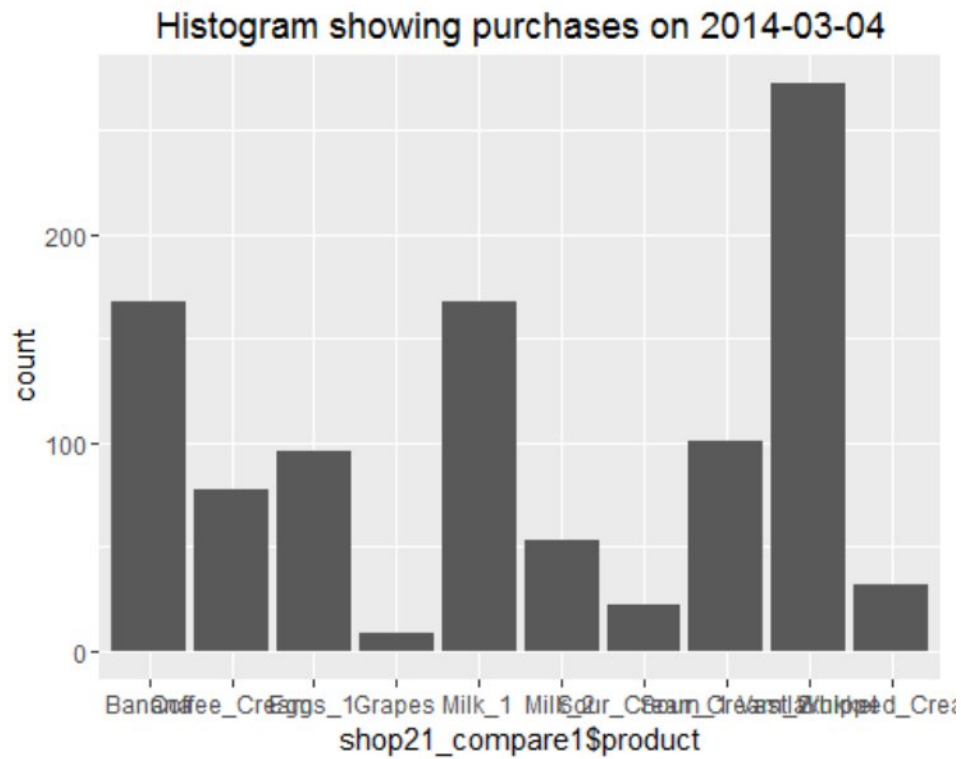

##	product	freq
## 1	Banana	403
## 2	Coffee_Cream	388
## 3	Eggs_1	186
## 4	Grapes	23
## 5	Milk_2	611
## 6	Sour_Cream_1	203
## 7	Sour_Cream_2	128
## 8	Whipped_Cream	49

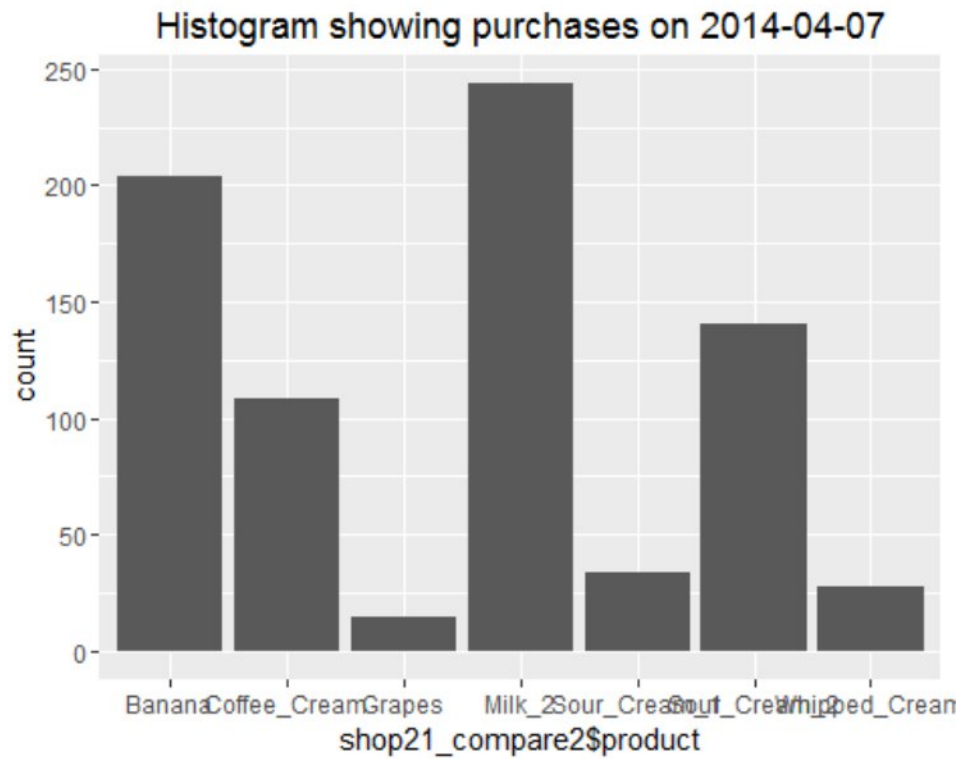

Boxplot 3.5 shows another slightly different shift in analysis provides as we continue to see several missing products on Monday 7th of April 2014 in shop 21 as per the statistics below. Eggs2 was never present in the shop whereas Vastlakukkel was as usual present only on Tuesday 4th OF March 2014. Grapes were also missing at shop 21 on Saturday 7th of June 2014.

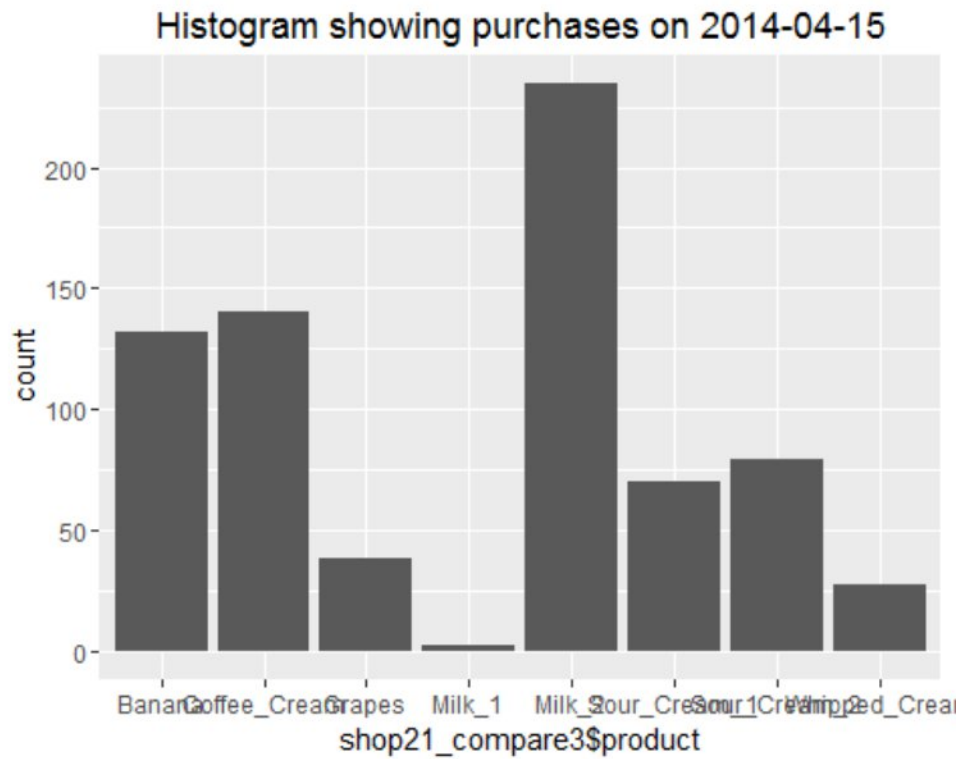

##	product	freq
## 1	Banana	168
## 2	Coffee_Cream	77
## 3	Eggs_1	96
## 4	Grapes	9
## 5	Milk_1	168
## 6	Milk_2	53
## 7	Sour_Cream_1	22
## 8	Sour_Cream_2	101
## 9	Vastlakukkel	273
## 10	Whipped_Cream	32

```
##      product freq
## 1      Banana  204
## 2 Coffee_Cream 108
## 3      Grapes   15
## 4      Milk_2  244
## 5 Sour_Cream_1  34
## 6 Sour_Cream_2 140
## 7 Whipped_Cream 28
```

##	product	freq
## 1	Banana	132
## 2	Coffee_Cream	140
## 3	Grapes	38
## 4	Milk_1	2
## 5	Milk_2	235
## 6	Sour_Cream_1	70
## 7	Sour_Cream_2	79
## 8	Whipped_Cream	27

```
##      product freq
## 1      Banana  239
## 2 Coffee_Cream  120
## 3      Eggs_1  100
## 4      Milk_1   17
## 5      Milk_2  251
## 6 Sour_Cream_1  128
## 7 Sour_Cream_2  106
## 8 Whipped_Cream  31
```

Boxplot 3.6 describes the shop with shop_id = 32. It shows a similar trend regarding the details of several missing products on Monday 7th of April 2014 albeit lesser than in shop 21 when compared. Eggs2 was never present in the shop whereas Vastlakukkel was as usual present only on Tuesday 4th OF March 2014. Eggs1 was also missing at shop on Monday 7th of April 2014.

##	product	freq
## 1	Banana	299
## 2	Coffee_Cream	184
## 3	Eggs_1	151
## 4	Grapes	8
## 5	Milk_1	507
## 6	Milk_2	35
## 7	Sour_Cream_1	36
## 8	Sour_Cream_2	187
## 9	Vastlakukkel	383
## 10	Whipped_Cream	212

##	product	freq
## 1	Banana	296
## 2	Coffee_Cream	214
## 3	Grapes	51
## 4	Milk_1	34
## 5	Milk_2	513
## 6	Sour_Cream_1	76
## 7	Sour_Cream_2	195
## 8	Whipped_Cream	44

```
##      product freq
## 1    Banana  275
## 2 Coffee_Cream 241
## 3    Eggs_1  150
## 4    Grapes   41
## 5    Milk_1   31
## 6    Milk_2  423
## 7 Sour_Cream_1  73
## 8 Sour_Cream_2 151
## 9 Whipped_Cream 48
```

- Calculate the nr of purchases of each product during every hour in each shop. Make a table with a product in particular shop as rows and time by hour as columns; In each cell a nr of purchases in that hour. Draw an heatmap version of the sales data. E.g. use Excel "Conditional formatting" => "Color Scales"

Purchases Between 07:00 and 08:00

From the analysis of shops visited on different days, we can conclude authoritatively based on this data that the highest visits and purchases took place in shop 4 on all days while the lowest purchases on all days was at shop 21. This could be due to several factors amongst which could be the proximity to city center of living areas (shop 4 might be closer to the city center or residential areas while shop 21 might possibly be in the outskirts of town). The population in residential areas and/or city center is definitely higher than in the outskirts of the city or villages hence could play in relatively important role in the frequency of visits and purchases in this case. There is also the possibility of the shop size where shop 4 might be a huge departmental shop located in a shopping plaza or mall while shop 21 might just be a small supermarket located on a street or somewhere. Lastly (but not limited to just my three points), it might be a situation for both prize and quality of goods. Where the prize might be cheaper and/or quality better in Shop 4 than in shop 21 which invariably makes shop 4 more desirable than shop 21 for shoppers.

On this data above I can also clearly see that the highest number of purchases occurred on Tuesday 23rd of December 2014 and it was closely followed by Wednesday 31st of December 2014. This I believe was greatly influenced by the Christmas holiday shopping which is usually done around this period. The holiday season definitely helped in enhancing sales. There is also the possibility that there were a higher amount of discounts in products and this might have resulted in the higher number of purchases during the festive season. The low sales were however recorded between Tuesday 4th of March 2014 and Monday 7th of April 2014 though a certain product Vastlakukkel made significant gains during one day (Tuesday 4th of March 2014) this period whilst being almost insignificant almost all through the year. This might be due to a cultural reason (maybe the easter period in a country that isn't religious at all or celebrates the easter by having and sharing Vastlakukkel).

*Identify if different products are purchased in different relative frequency over the weekdays

From the data above we can see that the frequency of products were a bit stable during weekdays except in some certain cases. Between January and March 2014, Milk-1 was the most purchased product however this changed for the rest of the year beginning from April when Milk-2 took over as the highest purchased product. This can be attributed to several factors including (but not limited to) price and/or quality. On Tuesday 4th of March Vastlakukkel was the highest purchased product (as earlier mentioned) however it was notably absent for the rest of the year. The least purchased product amongst the available products in shops was Eggs-2 and this remained as the least purchased (and probably less desired) product all year round.

Normalise frequency of purchases to reflect a relative share of purchasing that product.

Distribution for volume of total purchases of all prod

Does this normalisation help in task 4, to identify when shop has ran out of products?

In my opinion it does help

Shop 3	07:00 - 08:00	08:00 - 09:00	09:00 - 10:00	10:00 - 11:00	11:00 - 12:00	12:00 - 13:00	13:00 - 14:00	14:00 - 15:00	15:00 - 16:00	16:00 - 17:00	17:00 - 18:00	18:00 - 19:00	19:00 - 20:00	20:00 - 21:00	21:00 - 22:00	22:00 - 23:00	23:00 - 00:00
